Health Information Technology

# Understanding The Draft Trusted Exchange Framework

---

Genevieve Morris, Principal Deputy National Coordinator, ONC  
Elise Anthony, Director of Policy, ONC  
March 6, 2018

The Office of the National Coordinator for  
Health Information Technology

## What is the Draft Trusted Exchange Framework?

# Format of the Draft Trusted Exchange Framework

## Part A—Principles for Trusted Exchange

General principles that provide guardrails to engender trust between Health Information Networks (HINs). Six (6) categories:

- » **Principle 1 - Standardization:** *Adhere to industry and federally recognized standards, policies, best practices, and procedures.*
- » **Principle 2 - Transparency:** *Conduct all exchange openly and transparently.*
- » **Principle 3 - Cooperation and Non-Discrimination:** *Collaborate with stakeholders across the continuum of care to exchange electronic health information, even when a stakeholder may be a business competitor.*
- » **Principle 4 - Security and Patient Safety:** *Exchange electronic health information securely and in a manner that promotes patient safety and ensures data integrity.*
- » **Principle 5 - Access:** *Ensure that patients and their caregivers have easy access to their electronic health information.*
- » **Principle 6 - Data-driven Accountability:** *Exchange multiple records at one time to enable identification and trending of data to lower the cost of care and improve the health of the population.*

## Trusted Exchange Framework

### PART A

### 6 PRINCIPLES

### PART B

### TERMS AND CONDITIONS

## Part B—Minimum Required Terms and Conditions for Trusted Exchange

A minimum set of terms and conditions for the purpose of ensuring that common practices are in place and required of all participants who participate in the Trusted Exchange Framework, including:

- » Common authentication processes of trusted health information network participants;
- » A common set of rules for trusted exchange;
- » A minimum core set of organizational and operational policies to enable the exchange of electronic health information among networks.

# Goals of the Draft Trusted Exchange Framework

## GOAL 1

**Build on and extend existing work done by the industry**

The Draft Trusted Exchange Framework recognizes and builds upon the significant work done by the industry over the last few years to broaden the exchange of data, build trust frameworks, and develop participation agreements that enable providers to exchange data across organizational boundaries.

## GOAL 2

**Provide a single “on-ramp” to interoperability for all**

The Draft Trusted Exchange Framework provides a single “on-ramp” to allow all types of healthcare stakeholders to join any health information network they choose and be able to participate in nationwide exchange regardless of what health IT developer they use, health information exchange or network they contract with, or where the patients’ records are located.

## GOAL 3

**Be scalable to support the entire nation**

The Draft Trusted Exchange Framework aims to scale interoperability nationwide both technologically and procedurally, by defining a floor, which will enable stakeholders to access, exchange, and use relevant electronic health information across disparate networks and sharing arrangements.

## GOAL 4

**Build a competitive market allowing all to compete on data services**

Easing the flow of data will allow new and innovative technologies to enter the market and build competitive, invaluable services that make use of the data.

## GOAL 5

**Achieve long-term sustainability**

By providing a single “on-ramp” to nationwide interoperability while also allowing for variation around a broader set of use cases, the Draft Trusted Exchange Framework ensures the long-term sustainability of its participants and end-users.

The Office of the National Coordinator for  
Health Information Technology

## Who can use the Trusted Exchange Framework?

# Stakeholders who can use the Trusted Exchange Framework

## HEALTH INFORMATION NETWORKS

# Defining Terms:

## Who is the Trusted Exchange Framework applicable to?

The Trusted Exchange Framework aims to create a technical and governance infrastructure that connects

**Health Information Networks**

together through a core of

**Qualified Health Information Networks.**

# What is a Health Information Network?

## Health Information Networks (HINs) are an Individual or Entity that:

1. Determines, oversees, or administers policies or agreements that define business, operational, technical, or other conditions or requirements for enabling or facilitating access, exchange, or use of electronic health information between or among two or more unaffiliated individuals or entities;
2. Provides, manages, or controls any technology or service that enables or facilitates the exchange of electronic health information between or among two or more unaffiliated individuals or entities; or
3. Exercises substantial influence or control with respect to the access, exchange, or use of electronic health information between or among two or more unaffiliated individuals or entities.

# What is a Qualified Health Information Network?

**A Qualified Health Information Network (Qualified HIN) must meet ALL of the requirements of a HIN. In addition, it must also:**

- Be able to locate and transmit ePHI between multiple persons and/or entities electronically;
- Have mechanisms in place to impose Minimum Core Obligations and to audit Participants' compliance;
- Have controls and utilize a Connectivity Broker service;
- Be participant neutral; and
- Have Participants that are actively exchanging the data included in the USCDI in a live clinical environment.

The Office of the National Coordinator for  
Health Information Technology

What are the benefits  
of the Trusted  
Exchange Framework?

# Trusted Exchange Framework Benefits for HINs

## For Qualified HINs and HINs the Trusted Exchange Framework will:

**Give HINs and their participants access to more data on the patients they currently serve.**

- This will enhance care coordination and care delivery use cases.

**The Trusted Exchange Framework ensures that there is no limitation to the aggregation of data that is exchanged among Participants.**

- This will allow organizations, including Health IT Developers, HINs, QCDRs, and other registries to use the Trusted Exchange Framework to obtain clinical data from providers and provide analytics services. (Note that appropriate BAs must be in place between the healthcare provider and analytics provider.)

# Trusted Exchange Framework Benefits for Providers

## For Health Systems and Ambulatory Providers the Trusted Exchange Framework will:

**Enable them to join one network and have access to data on the patients they serve regardless of where the patient went for care.**

- This enables safer, more effective care, and better care coordination.

**Enable them to eliminate one off and point-to-point interfaces**

- This will allow providers and health systems to more easily work with third parties, such as analytics products, care coordination services, HINs, Qualified Clinical Data Registries (QCDRs), and other registries. (Note that appropriate BAs must be in place between the healthcare provider and analytics provider.)

# Trusted Exchange Framework Benefits for Patients

## For Patients and Their Caregivers, the Trusted Exchange Framework will:

**Enable them to find all of their health information from across the care continuum, even if they don't remember the name of the provider they saw.**

- This enables patients and their caregivers to participate in their care and manage their health information.

The Office of the National Coordinator for  
Health Information Technology

How will the Trusted  
Exchange Framework  
work?

# Recognized Coordinating Entity (RCE)

## Recognized Coordinating Entity

The RCE is the entity selected by ONC that will enter into agreements with HINs that qualify and elect to become Qualified HINs in order to impose, at a minimum, the requirements of the Common Agreement set forth herein on the Qualified HINs and administer such requirements on an ongoing basis as described herein.

The RCE will act as a governance body that will operationalize the Trusted Exchange Framework by incorporating it into a single, all-encompassing Common Agreement to which Qualified HINs will agree to abide. In its capacity as a governance body, the RCE will be expected to monitor Qualified HINs compliance with the final TEFCA and take actions to remediate non-conformity and non-compliance by Qualified HINs, up to and including the removal of a Qualified HIN from the final TEFCA and subsequent reporting of its removal to ONC.

The RCE will also be expected to work collaboratively with stakeholders from across the industry to build and implement new use cases that can use the final TEFCA as their foundation, and appropriately update the TEFCA over time to account for new technologies, policies, and use cases.

[READ MORE: How Will it Work?](#)

# Recognized Coordinating Entity (RCE)

2018  
Selection

## Process for Recognizing Entity

ONC will release an open, competitive Funding Opportunity Announcement (FOA) in spring 2018 to award a single multi-year Cooperative Agreement to a private sector organization or entity. The RCE will need to have experience with building multi-stakeholder collaborations and implementing governance principles in order to be eligible to apply for the Cooperative Agreement.

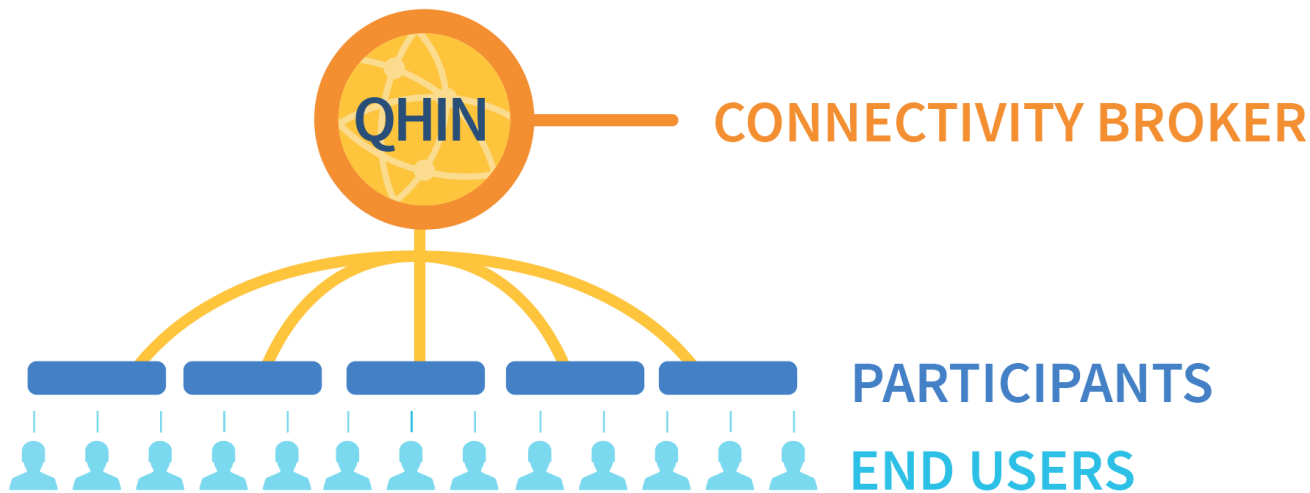

## Expectations for Entity

ONC will work with the RCE to incorporate the Trusted Exchange Framework into a single Common Agreement to which Qualified HINs and their participants voluntarily agree to adhere.

The RCE will **have oversight, enforcement, and governance responsibilities for each of the Qualified HINs** who voluntarily adopt the final TEFCAs.

READ MORE: [How Will it Work?](#)

# Structure of a Qualified Health Information Network

READ MORE: QHINs in Part B, Section 2

READ MORE: Connectivity Broker Capabilities in Part B, Section 3

**A Qualified HIN (QHIN)** is a network of organizations working together to share data. QHINs will connect directly to each other to ensure interoperability between the networks they represent.

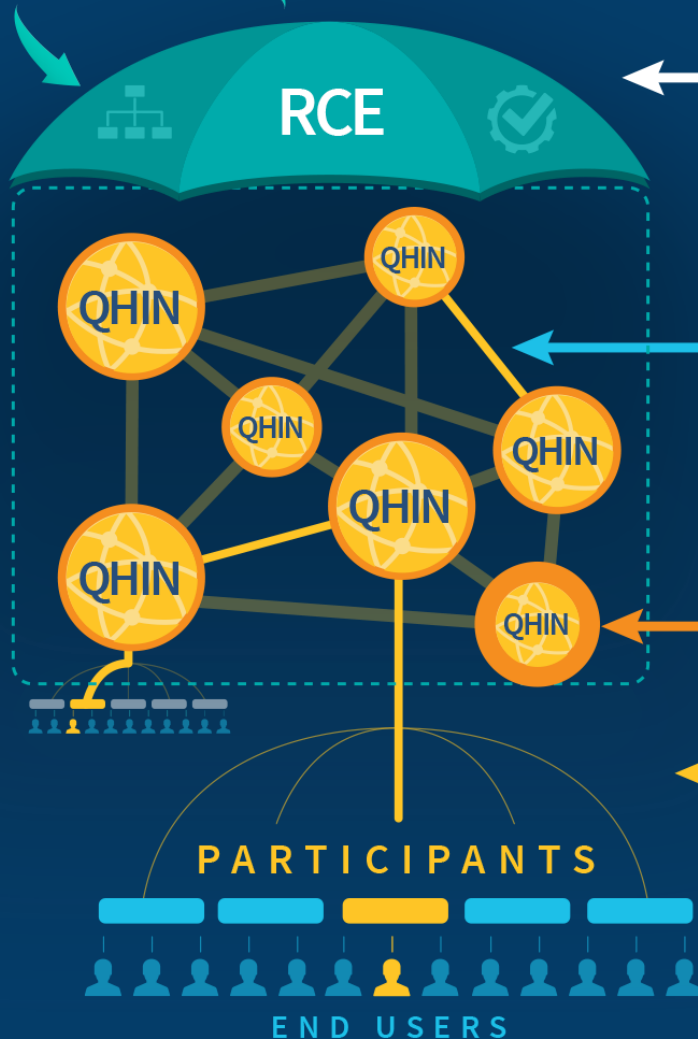

**A Connectivity Broker** is a service provided by a Qualified HIN that provides all of the following functions with respect to all Permitted Purposes: master patient index (federated or centralized); Record Locator Service; Broadcast and Directed Queries, and EHI return to an authorized requesting Qualified HIN.

**A Participant** is a person or entity that participates in the QHIN. Participants connect to each other through the QHIN, and they access organizations not included in their QHIN through QHIN-to-QHIN connectivity. Participants can be HINs, EHR vendors, and other types of organizations.

**An End User** is an individual or organization using the services of a Participant to send and/or receive electronic health info

# How Will the Trusted Exchange Framework Work?

The Office of the National Coordinator for Health Information Technology

RCE provides oversight and governance for Qualified HINS.

Qualified HINs connect directly to each other to serve as the core for nationwide interoperability.

QHINs connect via connectivity brokers.

Each Qualified HIN represents a variety of networks and participants that they connect together, serving a wide range of end users.

READ MORE: QHINs in Part B, Section 2

READ MORE: Connectivity Broker Capabilities in Part B, Section 3

# Qualified HIN Requirements Clarifications

## INCLUDED

- ◆ A minimum floor in the areas where there is currently variation between HINs that causes a lack of interoperability.
- ◆ Obligation to respond to Broadcast or Directed Queries for all the Permitted Purposes outlined in the Trusted Exchange Framework.
- ◆ Qualified HINs must exchange all of the data specified in the USCDI to the extent such data is then available and has been requested.
- ◆ Base set of expectations for how Qualified Health Information Networks connect with each other.

## NOT INCLUDED

- ◆ A full end-to-end agreement that would be a net new agreement.
- ◆ No expectation that every HIN will serve same constituents or use cases. (i.e. no requirement that Qualified HINs initiate Broadcast or Directed Queries for all of the Permitted Purposes outlined in the Trusted Exchange Framework)
- ◆ Not dictating internal technology or infrastructure requirements.
- ◆ No limitation on additional agreements to support uses cases other than Broadcast Query and Directed Query for the Trusted Exchange Framework specified permitted purposes.

## TRUSTED EXCHANGE FRAMEWORK CONTENTS

## What use cases are covered under the Trusted Exchange Framework?

# Permitted Purposes

READ MORE: Part B, Section 1

## Broadcast Query

Sending a request for a patient's Electronic Health Information (EHI) to all Qualified HINs to have data returned from all organizations who have it.

Supports situations where it is unknown who may have Electronic Health Information about a patient.

## Directed Query

Sending a targeted request for a patient's Electronic Health Information to a specific organization(s).

Supports situations where you want specific Electronic Health Information about a patient, for example data from a particular specialist.

READ MORE: Broadcast and Directed Queries- Part B, Section 5.4 and Section 3

READ MORE: Population level data- Part B, Section 8

## Population Level Data

Querying and retrieving Electronic Health Information about multiple patients in a single query.

Supports population health services, such as quality measurement, risk analysis, and other analytics.

# US Core Data for Interoperability (USCDI) Glide Path

The USCDI establishes a minimum set of data classes that are required to be interoperable nationwide and is designed to be expanded in an iterative and predictable way over time. Data classes listed in the USCDI are represented in a technically agnostic manner.

1. USCDI v1— Required—CCDS plus Clinical Notes and Provenance
2. Candidate Data Classes—Under consideration for USCDI v2
3. Emerging Data Classes— Begin evaluating for candidate status

## U.S. CORE DATA FOR INTEROPERABILITY

**USCDI v1**  
REQUIRED

**Candidate  
Data Classes**  
UNDER CONSIDERATION

**Emerging  
Data Classes**  
BEGIN EVALUATING

# Expansion of US Core Data for Interoperability (USCDI)

As the USCDI expands, Qualified HINs and their Participants will be required to upgrade their technology to support the data specified in the USCDI.

Some Candidates will be Accepted to USCDI

Some Candidates Require Further Work

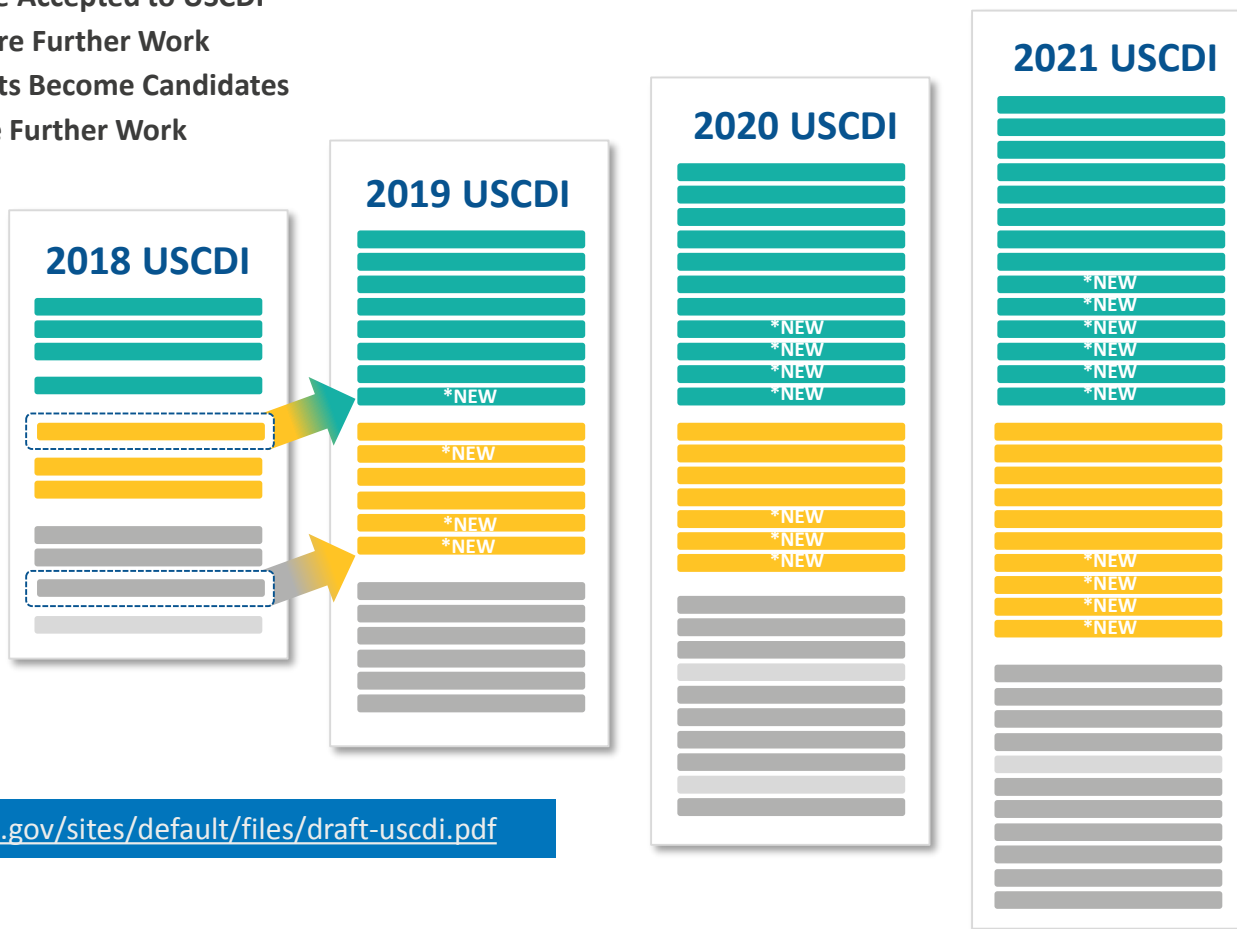

Some Emerging Elements Become Candidates

Some Emerging Require Further Work

Supported  
Data Elements

Candidate  
Data Elements

Emerging  
Data Elements

What privacy and  
security protections does  
the Trusted Exchange  
Framework guarantee?

# Privacy/Security: Identity Proofing

Identity proofing is the process of verifying a person is who they claim to be. The Trusted Exchange Framework requires identity proofing (referred to as the Identity Assurance Level (IAL) in SP 800-63A).

**End Users and Participants** Each Qualified HIN shall require proof of identity for Participants and participating End Users at a minimum of IAL2 prior to issuance of credentials.

**Individuals** Each Qualified HIN shall require its End Users and Participants to proof the identity for Individuals at a minimum of IAL2 prior to issuance of credentials. Individuals must provide strong evidence of their identity.

IAL 2 REQUIREMENT	DESCRIPTION
<b>Evidence</b>	<ul style="list-style-type: none"><li>• One (1) piece of SUPERIOR or STRONG evidence; OR</li><li>• Two (2) pieces of STRONG evidence; OR</li><li>• One (1) piece of STRONG evidence plus two (2) pieces of ADEQUATE evidence</li></ul>
<b>Validation</b>	<ul style="list-style-type: none"><li>• Each piece of evidence must be validated with a process able to achieve the same strength as the evidence presented.</li><li>• Validation against a third-party data service SHALL only be used for one piece of presented identity evidence.</li></ul>
<b>Address Confirmation</b>	<ul style="list-style-type: none"><li>• The Credential Service Provider (CSP) SHALL confirm address of record through validation of the address contained on any supplied, valid piece of identity evidence.</li></ul>

READ MORE: Part B, Section 6.2.4

# Privacy/Security: Identity Proofing - EXCEPTIONS

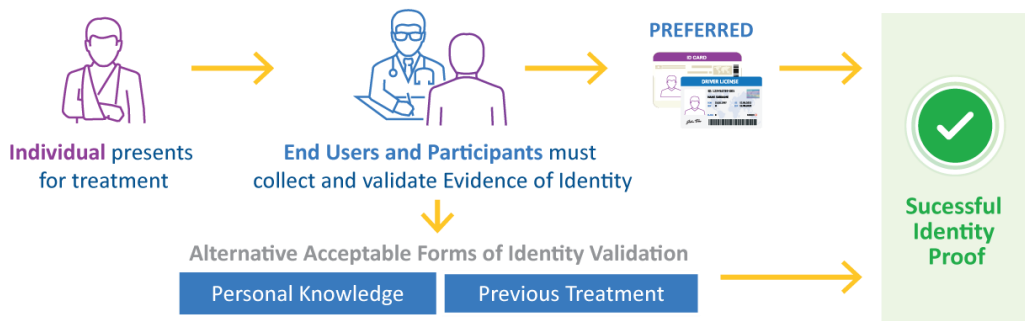

Qualified HINs, Participants, or End Users are responsible for proofing Individuals at the IAL2 level, HOWEVER:

## Trusted Referee and Authoritative Source:

In instances where the individual enrolling cannot meet the identity evidence requirements specified, organization staff may act as a trusted referee, allowing them to use personal knowledge of the identity of patients when enrolling patients as subscribers to assist in identity proofing the enrollee.

**Antecedent Event:** Staff may also act as authoritative sources by using knowledge of the identity of the individuals (e.g., physical comparison to legal photographic identification cards such as driver's licenses or passports, or employee or school identification badges) collected during an antecedent, in-person registration event.

## For example, IAL2 identity proofing for an Individual can be accomplished by two of the following:

1. Physical comparison to legal photographic identification cards such as driver's licenses or passports, or employee or school identification badges,
2. Comparison to information from an insurance card that has been validated with the issuer, e.g., in an eligibility check within two days of the proofing event, and
3. Comparison to information from an electronic health record (EHR) containing information entered from prior encounters.

READ MORE: Part B, Section 6.2.4

# Privacy/Security: Authentication

Digital authentication is the process of establishing confidence in a remote user identity communicating electronically to an information system. NIST draft SP 800-63B refers to the level of assurance in authentication as the Authenticator Assurance Level (AAL). Federal Assurance Level (FAL) refers to the strength of an assertion in a federated environment, used to communicate authentication and attribute information (if applicable) to a relying party (RP).

Each Qualified HIN shall authenticate End Users, Participants, and Individuals at a minimum of AAL2, and provide support for at least FAL2 or, alternatively, FAL3.

Connecting to a Qualified HIN or one of its Participant will require **two-factor authentication**. A list of acceptable second factors (in addition to a username and password) can be found at [https://pages.nist.gov/800-63-3/sp800-63b/sec4\\_aal.html](https://pages.nist.gov/800-63-3/sp800-63b/sec4_aal.html).
